BE Teammate

AI teammates that work inside Microsoft Teams — with tools, memory, and a paper trail.

TEAMS-NATIVE

TOOL-USING

AUDITABLE

PER-PERSON PRIVATE

MEMORY

RUNBOOKS

WHY NOW

Work is everywhere. Answers are not.

01

Context is scattered

Mail, chat, files and systems each hold a piece. People repeat themselves to every new tool.

02

Knowledge walks

The fix lives in one person's head. When they leave, the procedure leaves with them.

03

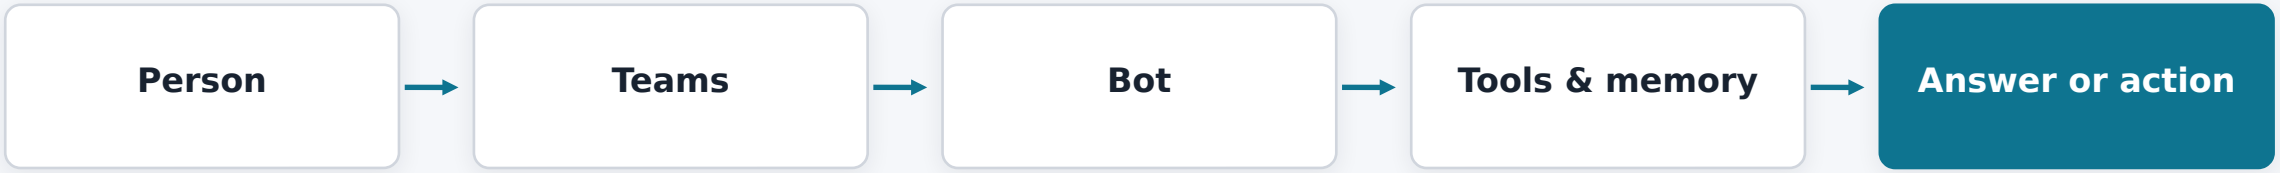

Changes are risky

A bot that can act needs a gate, a record, and a way for a person to say no.

BE Teammate puts a teammate in the conversation — with the context and the controls.

THE SHAPE

A teammate, not a chat window

In Teams

People talk where they already work. No new app to open.

With a persona

Each bot has a role, a tone and clear boundaries.

With tools

Mail, calendar, files, web, databases, servers, APIs and MCP.

With memory

Learns the person, the team and the procedure.

THE PORTFOLIO

Two kinds of teammate

SB Service bots

Shared by a team or department. Depth for a domain.

- Runbooks and shared notes
- Connections to real systems
- Changes need a confirmation card
- Examples: IT, finance, HR, sales

PA Personal assistants

One per allowed person. Private by default.

- Only in the owner's 1:1 chat
- Acts as the owner in Microsoft 365
- Own memory and learnings
- Separate Personal assistants section

Same engine, different privacy and scope.

OPERATE · CONFIGURE · AUDIT

One admin surface for the whole fleet

AUDIT

Activity

Operate, configure, audit — the same screen for every bot.

01

The capabilities

What a teammate can know, reach, change, remember and report.

BE TEAMMATE

Service bots: depth for a team

01

Knows the procedure

Runbooks and shared notes are searched before the bot acts. It quotes the evidence.

02

Reaches the systems

SSH, SQL, HTTP and MCP connections, scoped per bot and per action.

03

Asks before changing

Read-only checks run freely. Changes need a person and a card.

IT support

Finance

HR

Customer service

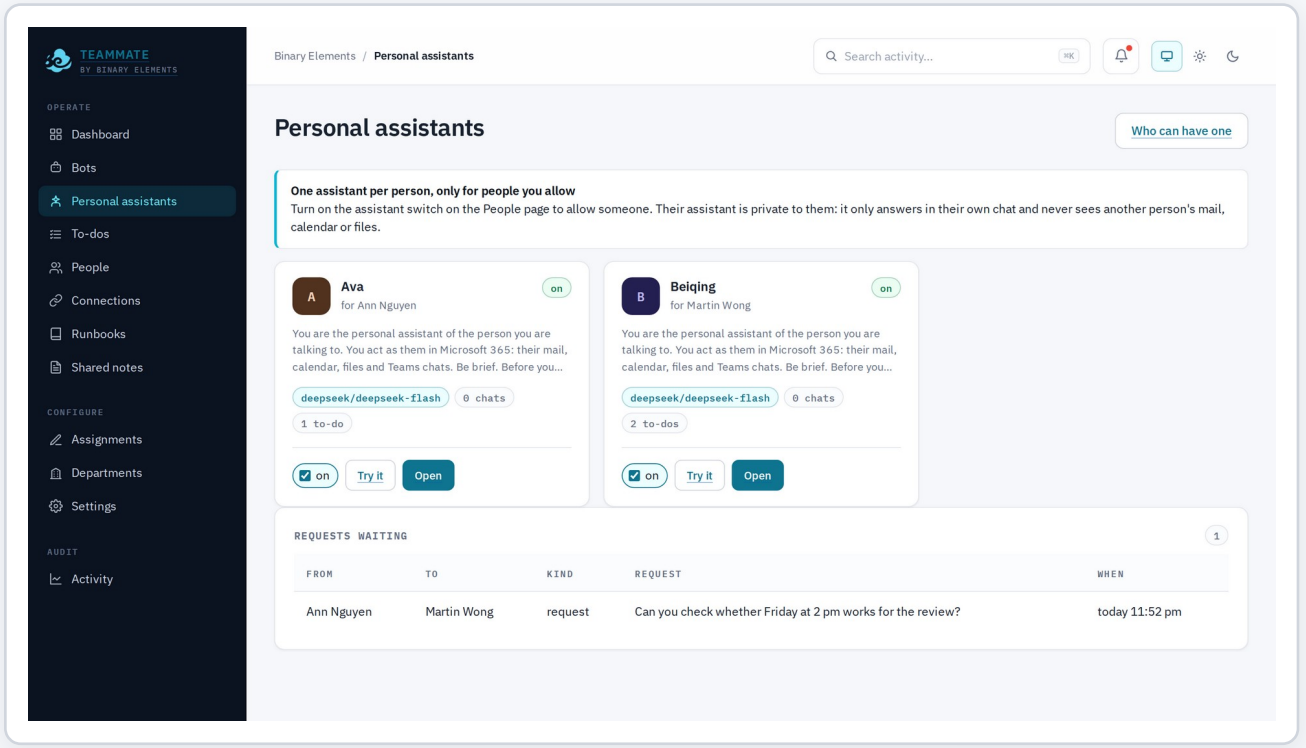

Sales

Project coordination

The bot reads the runbook, then follows it.

Personal assistants: one owner, one assistant

- Only for people you allow
- Private 1:1 chat
- Acts as the owner in Microsoft 365
- Own memory and learnings
- Separate section, not mixed into Bots

Ava for Ann · Beiqing for Martin — each with its own name, model and scope.

BE TEAMMATE

The bot reads the runbook before it acts

01

Upload

Drop in a markdown runbook.

02

Review

The model reads it back: what it understood, what is missing.

03

Test

Open a bot's test chat with the first message filled in.

04

Use

It lives in shared notes under troubleshooting/.

Shared notes

The company knowledge base: searchable, versioned, editable, and available to every bot.

Runbooks

A procedure with symptoms, checks, evidence and escalation. A file, not a per-system workflow.

Reach the systems, not the whole company

SSH

Servers and network devices. Read-only or change.

SQL

Postgres, MySQL and SQL Server. Query with a scoped account.

HTTP

Internal APIs with headers and secrets.

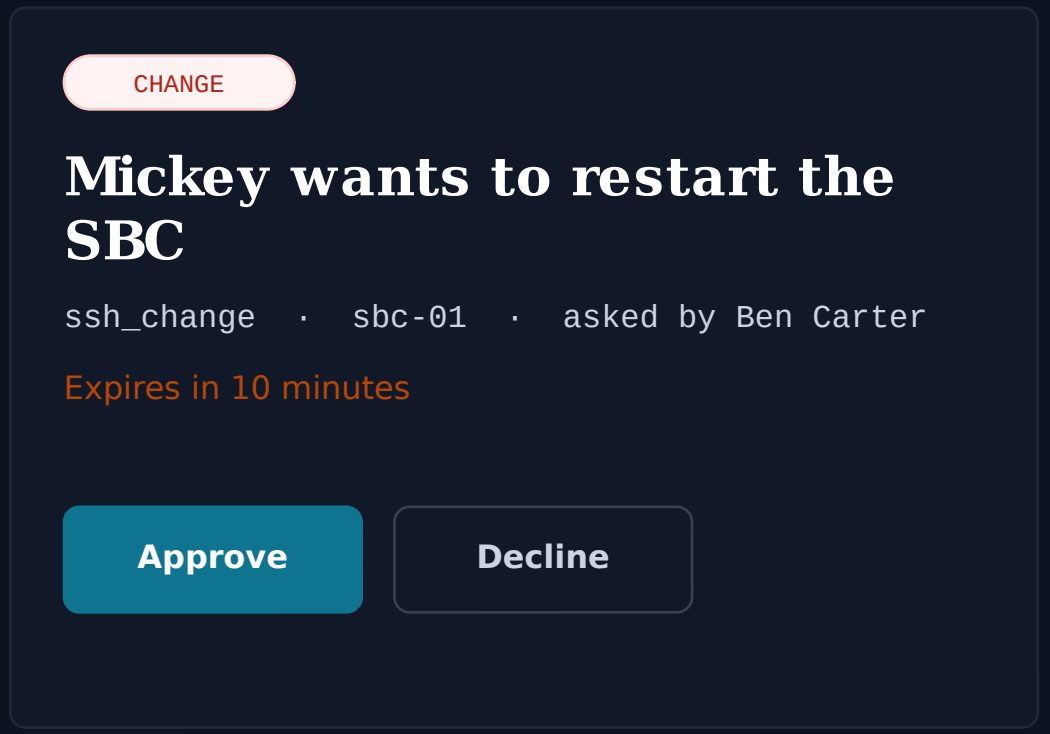

MCP

Any MCP server, including OAuth sign-in.

Per-bot access · encrypted secrets · host-key pinning · revoke for every bot

SAFETY

Safe by default: the gate and the card

01 Classify
Read or change, by tool and target.

02 Ask
A change gets a card in the chat.

03 Approve
Only the asker, an admin or a head can say yes.

04 Audit
The decision, the person and the time are recorded.

If the gate cannot decide, it asks. If nobody approves, nothing happens.

Every answer has a receipt

Messages

Who asked, which bot, which chat.

Tool calls

Name, input, status and timing.

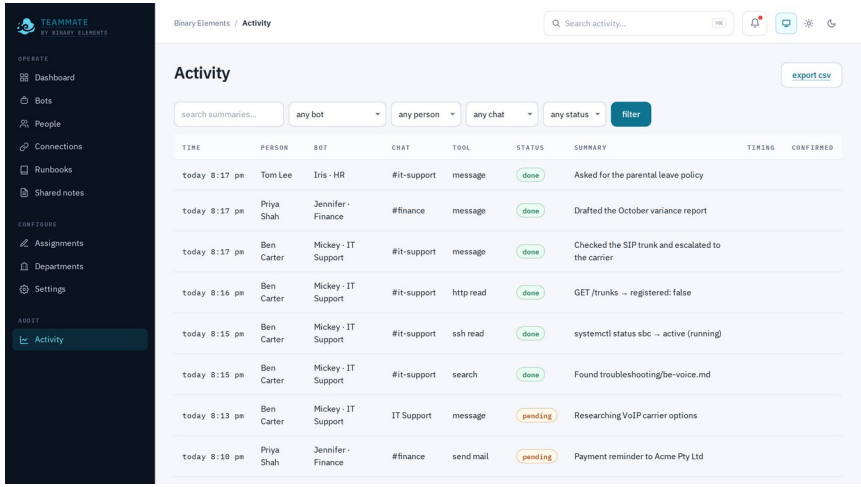

Confirmations

Who approved or declined.

Cost

Per turn, per bot, per period.

Time	Person	Bot	Status	Summary
9:41	Ben	Mickey	done	Checked the SIP trunk
9:38	Priya	Jennifer	done	Drafted the variance report
9:28	Jennifer	Jennifer	waiting	Payment reminder
9:24	Mickey	Mickey	declined	Restart the SBC

Every turn, every tool, every decision.

Filter, export CSV, and see the timing of every turn.

Memory that scales without stuffing the prompt

CORE

Learnings

A small set of short rules. Always in the prompt. Corrections and preferences.

LONG TAIL

Memory items

Facts, procedures and preferences. Postgres full-text search; the top 12 relevant items per turn.

RETRIEVED FOR THIS MESSAGE

- BE Voice: check the SIP trunk registration first
- Carrier escalation: send the trunk id and SIP code
- Melbourne firewall owner is Tom
- Prefer read-only checks on shared systems

Never the whole table. The model sees only what matters now.

The bot reviews its own day

01 Review

Activity, transcripts, denials and failures.

02 Learn

learn / update / forget; remember / update / forget.

03 Act

Propose for approval, or apply and post to the group.

Modes

Off	No reflection.
Propose	Learnings wait for an admin.
Auto	Learnings apply; the bot posts what it learnt.

SAVED

Yesterday's reflection

Caught the SBC restart, replaced the old rule, added a read-only check. Posted to the group.

Per bot, per owner, at the chosen hour. One reflection per day.

BE TEAMMATE

Work that runs on its own

01

Reminders

One-off, in a chat. 'Remind me at 3 pm.'

02

Repeating routines

Cron: weekdays 9 am, every Monday, and so on.

03

Background jobs

Long research runs beside the chat and posts when done.

50 model calls for a chat turn · 100 for a background job · grant or confirm changes

Assistants can ask each other

with a boundary

Ava

Ann's assistant

wants to add a to-do for Martin.

`ask_assistant`

request body only

Beiqing

Martin's assistant

adds it, then tells Martin.

Low-risk todo

Added immediately to the recipient's list.

Anything else

Waits for the recipient owner's yes.

No shared memory

Only the request body; every request is audited.

To-dos: add, list, complete, update, delete in chat; admin To-dos page for the company.

BE TEAMMATE

The admin hears about it first

Alerts

Low DeepSeek balance

Below the threshold you set.

Failed actions

Tool, connection or mail failures.

Approvals waiting

A card still waiting after 10 minutes.

From teammate-admin@eml.binaryelements.com

DAILY · 8:00

Daily report

Replies 42 · Actions 18 · Spend $1.24

Failures 2 · Balance $6.82

Top bot: Mickey · 20 replies

Busiest: Ben Carter · 8

Dashboard link

Recipients and the hour live in Settings → Alerts.

The right model for the job

DeepSeek Flash

The value default. Fast, cheap and capable.

DEFAULT

DeepSeek V4 Pro

Hard troubleshooting and research.

HARD CASES

Qwen

A second provider. Alternative and fallback.

FALLBACK

OpenAI-compatible engine · per-bot model · provider profiles · fallback · no vendor lock-in

The DeepSeek balance is visible on the dashboard and in Settings.

TRUST

Built for the questions security will ask

01

Fail-closed gate

Unsure means ask, never guess.

02

Confirmation cards

Changes need a named person.

03

Full audit

Every call, decision and cost.

04

Secrets encrypted

Never shown to the model.

05

Per-person privacy

The PA only sees its owner's chat.

06

SSO / OIDC

Microsoft sign-in; admins and heads.

The assistant only sees its owner's 1:1 chat and Graph token. No cross-person memory.

BE TEAMMATE

What changes for the business

01

Faster answers

First-line resolution without waiting for a specialist.

02

Less repetition

The same question does not need the same person.

03

Safer changes

A card and a record before anything changes.

04

Knowledge retained

Runbooks and memory survive staff turnover.

05

Full visibility

Spend, failures, approvals and activity in one place.

06

Per-person privacy

Personal assistants without a shared inbox.

One teammate per team; one assistant per person.

Start small, prove it, expand

01

Connect

Teams, a provider key, Microsoft 365.

02

Configure

One bot, one runbook, one connection.

03

Pilot

One team, 30 days, real questions.

04

Measure

Resolution time, deflection, failures, spend.

Then add the next team and the next runbook.

Put a teammate in the conversation
